### PU 自结皮生产工艺

PU INTEGRAL SKIN PRODUCTION TECHNIQUE

#### 自结皮聚氨酯 (PU) 泡沫

自结皮泡沫塑料又称整皮模塑泡沫塑料，它不用其他材料做表面，依靠发泡组份在发泡成型时，一次性形成表材与泡沫芯材，也就是利用特殊工艺将聚氨酯组份一次形成带坚实表皮的泡沫塑料制品。由于自结皮泡沫带有高强度的外表皮，所以其制品得到了广泛应用。

#### 其生产工艺过程如下：

组合聚醚 (A) 高压发泡机  
组合聚醚 (B) 碰撞混合 → 注入模具 → 合模熟化 → 脱模 → 修整产品

#### 自结皮聚氨酯 (PU) 多方面优点

(1)无任何有害物质，环保。(2)皮质拉力好，不易撕裂，力学性优于人造革。(3)耐腐蚀，抗磨性能好，寿命是人造革的好几倍。(4)无任何难闻气味。(5)没有气孔，防水，不会渗透。(6)皮质柔软，具有与人体皮肤相透得肉感；耐冲性，减震，不易使人体受伤，安全。(7)耐寒性，不易受气温的影响，适用于低温的天气。

#### Integral skin polyurethane(PU)foam

Integral skin foam plastic is also named full mould foam plastic.It doesn't need other materials to foam the surface. When the ingredients is foaming,it makes the surface and structure at the same time.This means the foam plastic product with hard surface is formed from polyurethane for one time with a special technique.As the integral skin foam has high strength surface,its products are widely used.

#### The procedures of production technique are the following:

Premixed polyether polyols(A) High pressure foaming machine  
Premixed polyether polyols(B) Colliding and mixing → Mould filling → Mould assembly aging → Demoulding → Product processing

#### The advantages of integral skin polyurethane(PU)

1.Harmless material,environmental protective;2.The leather has high tensile strength,not easy to rip,the mechanical property is better than man-made leather;3,Good corrosion resistance,good wear resistance,the service life is several times longer than man-made leather;4.No unpleasant smell;5.No air holes ,water proof,no penetration;6.The leather is soft,has similar texture as the human skin,impact resistance,damping,protect the human body from injury,safety; 7,Cold-resistance,not easily influenced by temperature,suitable for cold weather.

**椅面/Chair seat:**

采用优质201不锈钢1.3mm厚冲孔，抛光处理，表面光滑，经久耐用。  
It adopts the high-quality 201 stainless steel 1.3mm thick punching and polishing treatment. It has the smooth surface, and is durable in use.

**扶手、脚/Handrails, Feet:**

采用优质201不锈钢1.2mm厚，压铸焊接成型，表面经抛光拉丝处理。  
High-quality 201 stainless steel with the thickness of 1.2 mm is adopted for die-casting and welding, and the surface is polished and wiredrawn.

**横梁/Beam:**

采用2.0mm鞍钢拉伸出六角管，酸洗防锈处理后，静电喷漆。  
The hexagonal pipe is drawn out by 2.0 mm AnSteel. After pickling and rust-proof treatment, the electrostatic spray paint was applied.

## 机场椅系列

CHROME AIRPORT CHAIR SERIES

**电镀**-利用电解原理，使金属或合金沉积在制件表面，形成均匀、致密、结合力良好的金属层的过程。

### 钢铁件前处理（打磨件、非打磨件）工艺流程：

1.打磨件——除蜡——热浸除油——电解除油——酸蚀——其它电镀

2.非打磨件——热浸除油——电解除油——酸蚀——其它电镀

### 钢铁件多层电镀工艺流程：

除油——除锈——镀氰化铜——镀酸铜——镀半亮镍——镀高流镍——镀亮镍——镍封——镀铬

我司电镀产品采用双层镍铬，更加能增强金属的抗腐蚀性、增加硬度、防止磨耗、提高导电性、润滑性、耐热性、和表面美观。经过全球认可的SGS检测机构，在5%浓度，室温（35±2）℃经过中性盐雾测试48小时后，评级能达到6级以上。更高级别的电镀，可以根据客户需求定做。

Electroplate—by using the electrolysis to deposit the metal or alloy on the surface of products to form a uniform and compact metal coating with good binding force.

Procedure for steel parts pre-treatment(polished parts and unpolished parts).

polished part—wax removing—hot dipping oil removal—electrolysis oil removal—acid etching—other electroplate

Unpolished—hot dipping oil removal—electrolysis oil removal—acid etching—other electroplate

Steel parts laminated electroplate procedure:

Oil removal —rust removal —copper cyanide coating—acidic copper coating—semi-bright nickel coating—high sulphur nickel coating—bright nickel coating—nickel sealing—Chromium coating

The electroplate products is double-laminated with nickel and chromium which strengthened the corrosion resistance of metal.The hardness is improved and abrasion is prevented .It has Electrical conductivity,lubricity,heat resistance and nice appearance.Detected by the global recognized SGS detecting organization.In a concentration of 5% and a temperature of (35±2)℃,if tested neutral salt mist for 48 hours,the grade can be 6 or higher,Electroplate in higher grade can be achieved according to customer's demand.
